Availability	 Unavailable
Number	10042432
Producer code	EMCHCL60
EAN	1016488061616

Product description

Effetto Mariposa Caffelatex Tire Sealer.

It's an innovative tire sealant to prevent punctures used for tubeless, tubeless, and neck tires in road, cross-country, and MTB cycling.

The first of its advantages over standard latex-based tire sealant products is that the Caffelatex product foams up as you ride and completely fills the tire with a foam called Actifoam.

The second advantage of Caffelatex is the unique properties of Actifoam, thanks to which we have the chance to reduce the rotational mass of the wheel, since a small amount of Caffelatex is enough to effectively seal the wheel, which guarantees that the tire will be patched in case of damage.

The sealant does not contain ammonia or other aggressive chemicals (it can be used for all tires on the market), and is harmless to the rim and tires. It is the best blend of strength and puncture resistance.

Its fast sealing action makes it ideal for mtb, cross-country and road tires tubeless, tubeless and necks. Caffelatex repairs punctures up to 5 mm (mtb tubeless) and 3 mm (road tubeless).

With its squeezable sachet and perfectly calibrated hose, Caffelatex 60 ml allows direct injection through Presta valves. Easy to transport, ideal for road applications (60 ml / 2 portions is the right amount for two 23 mm rails).

Thanks to its formula, Caffelatex is a very stable and long-lasting sealant, although its life also depends on the type of application and external conditions.

At the recommended quantities for the tire size, the expected seal life is:

Rails (with latex or butyl inner tube): 1-2 years

Tubeless UST tires: 4-6 months

Tubeless-ready tire: 2-4 months

Tube tire: 2-3 months

However, due to our inability to know our customers' specific application (type of wheel/tire, thickness and porosity of tire sidewalls, external temperature and humidity, bike storage conditions...), we recommend checking Caffelatex every 2 months to make sure it is liquid and retains its "puncture prevention" effect.

Once dry, Caffelatex wheels are still tight, but Caffelatex will not actively repair punctures.

Temperatures of use and storage:

Very cold to very hot, far exceeding those of first-generation latex sealants (use: -20 / + 50 ° C ~ storage: -15 / + 30 ° C).

Product from Polish distribution

Capacity: 60ml (sachet)

Included measuring cup for measuring the amount to be poured and tube:

for road tires we use 30ml,
cyclocross tires 30-50ml,
MTB tires 26x1.5-2.1 / 29x1.5-2.0 - 50ml and above 26x2.1 and 29x2.0 60-100ml
