Product description

The ZTR ARCH rim is used especially in enduro and heavy XC. It has a reinforced construction, making it extremely durable for extreme conditions. The technologies used in the development of the ARCH rim have ensured an affordable weight, while maintaining the robustness of the construction.

The rim uses BST or Bead Socket Technology. This is the technology of widened side walls of the rim. This treatment increases the performance of the entire wheel. The rim is not only widened, but also lowered by which a larger surface of the tire adheres to the ground. This will make the ride more comfortable for you, and the control of the bike will become simpler and more effective.

The weight limit of the ARCH rim is 104kg, making it a very popular choice among heavier riders.

Brand: Stan's NoTubes

Rim size: 29"

Weight: 453g

Height: 16mm

Purpose of the rim: Cross Country, Enduro
