Product description

Absoluteblack strives to create the best and most sophisticated sprockets on the market. Oval discs do not produce more power, they help unleash their true potential. Their key benefits include optimizing your footwork when pedaling, reducing knee strain, reducing effort on climbs, allowing you to increase speed - they help you be faster and more efficient. - One-of-a-kind, patented oval shape which allows you to overcome climbs easier and faster. While riding, they don't let you feel their "ovality" - The feeling of pedaling is as close as possible to round discs - They reduce the load on the knees in the "dead center" and facilitate smooth pedaling - They allow you to achieve and maintain an appropriate cadence - They reduce the risk of muscle cramps.

Absoluteblack Oval 104mm 10/11s Narrow-wide 30T sprocket

Specifications
